EXPERIENCE

Quantile Technologies · acquired by London Stock Exchange Group New York, NY
Lead Product Manager, Portfolio Optimization Sep 2025 – Present

- **I-Port AI Agent:** Owned 0-to-1 strategy and launch of a production AI agent for operations with live access to run state, configurations, and client data; cut compression-run setup from 3.5 hours to 8 minutes, enabled 3x run volume at constant headcount, and recorded zero AI-initiated configuration errors over 6 months.
- **QT CoCo AI Agent:** Led development and launch of an AI support agent pairing 2 domain-specific MCP servers with 6 years of production support knowledge; cut expert incident investigation from 4.5 hours to 11 minutes, reduced engineering escalations by 78%, and freed 750+ senior engineering hours a year for product development.
- **AI Platform & Controls:** Standardized human-supervised agent architecture across 5 enterprise systems, with reusable MCP servers, domain APIs, Pydantic-typed actions, deterministic services, and eval and QA baselines.

Product Manager, Portfolio Optimization Jul 2023 – Sep 2025

- **Portfolio Strategy & Growth:** Generated \$3M+ in new and expansion ARR by owning end-to-end discovery, product strategy, launch, and GTM for optimization products across rates, FX, and cross-currency swaps.
- **SwapAgent Cross-Currency Compression:** Owned 0-to-1 launch of multilateral cross-currency compression, securing LCH SwapAgent as settlement counterparty; opened \$6.5T of previously ineligible bilateral notional to optimization in 12 currency pairs, giving 18 banks 34% more notional reduction per run than bilateral optimization.
- **Simplified Compression:** Defined and launched dual-source swap valuation, removing a single point of failure in \$6T+ compression cycles; caught discrepancies 48h earlier and cut failed-run resubmissions by 91% at 24 banks.
- **ForexClear FX Forward & NDF Compression:** Designed and shipped compression with ForexClear’s margin API in the optimizer, reaching 100% proposal acceptance in 40+ live runs; four-source validation cut failures by 94%.

OpenGamma · acquired by Trading Technologies New York, NY
Product Analyst Jul 2022 – Jun 2023

- **What-If Margin Calculator:** Originated and shipped a 0-to-1 pre-trade margin simulator embedded in front-office workflows, with calculations validated against CME SPAN and ICE IRM across OTC and exchange-traded derivatives; enabled institutional clients to find allocations with up to 30% lower initial margin for equivalent risk.
- **Customer Discovery & Roadmap:** Led discovery across trading, treasury, risk, and operations to define the simulator’s capabilities, adopted by 20+ enterprise clients: banks, asset managers, commodity firms, and hedge funds.

INDEPENDENT PROJECTS

- **AgentFit:** Decision model that scores a workflow’s fit for an AI agent; 31 published gates cap its autonomy.
- **RideLens:** Web app, built end-to-end in Cursor, that compares Uber, Lyft, Empower, and Curb on live roads.
- **RailDrop:** Web app, built end-to-end in Cursor, that emails only when an Amtrak fare beats the price paid.
- **Daylight:** Native macOS app, built in Cursor, that schedules display warmth; 263 tests, no dependencies.
- **Also shipped:** Cartonry (packaging dielines), KeepFloor (Etsy pricing floors), and Pricing Hub (job costing).

SKILLS

AI & Systems: LLM orchestration, MCP, tool calling, agent evals, human-in-the-loop controls, Python, SQL, AWS

Product: 0-to-1 strategy, platform & API products, pricing & packaging, experimentation & analytics, GTM

Fintech: derivatives compression, portfolio optimization, initial margin, FX forwards & NDFs, CCPs

EDUCATION

Haverford College Haverford, PA
B.A., Economics & Linguistics · GPA 3.9/4.0 · cum laude · High Honors in Linguistics May 2022
